619 Wash and Drinking Troughs

Choose a custom or standard 619 length, then confirm fittings, outlet and rear edge.

Representative bare centre-outlet body. Tapware and supports are not shown. NOT TO SCALE.

Product details

Item	Selection information
Fitting configuration	A619: wash taps. B619: bubblers. D619: bubblers with at least one bottle filler. Confirm C619 requirements separately.
Body construction	Nominal 1.2 mm 304 stainless steel, No. 4 finish; 316 on request.
Section dimensions	365 mm nominal width. Confirm final section and depth on the project drawing.
619 standard lengths (mm)	800, 900, 1200, 1600, 1800, 2000, 2400, 2800, 3200, 3600 and 4000.
Outlet	Centre, left or right, viewed from the front. Centre outlets have a cross-braked floor. All outlets are pressed for plug and waste.
Rear edge - choose one	15 mm up tile lip; 15 mm down return; or 300 mm integral splashback.
Supply and accessories	Bare or pre-plumbed options. TG96 guard usually pre-fitted to B619/D619, subject to exact fit and tapware clearance.

Custom lengths and adjustments: Select a custom length up to 6000 mm, or choose the standard range above. We fabricate our troughs in our workshop and can assess project adjustments. Final dimensions, feasibility and inclusions require quotation and project-drawing confirmation.

Outlet advice: For lengths over 3000 mm, a centre outlet is not recommended because the cross-break provides limited fall. Discuss a left- or right-hand outlet instead.

Pressed outlet: For a 60 mm cut-out, the press is 90 mm overall diameter, about 3 mm deep tapering to about 6 mm at the hole edge. Confirm the waste and connection with the quotation.

Request a quote: State model, length, quantity, fittings, inlet and outlet locations, rear edge and whether end overflows are required. Confirm bubbler overflow requirements with the quotation. Dimensions, supports, connections and inclusions must match the project drawing; this is not a fabrication template.
